Read the paragraph and answer the questions that follow!

## The Moon

The Moon is the brightest and largest object in our night sky. We see it shining at night because its surface reflects light from the sun.

The moon is a satellite because it moves around Earth. The Moon is Earth's only natural satellite. It is about one-quarter the size of Earth and orbits around our planet about once every 27,3 days.

The Moon has no atmosphere or water, and its surface is rocky and dusty. It is also home to many craters, mountains, and valleys. We can better see The Moon with a telescope.

Choose a, b, or c for the correct answer!

- What is The moon?
  - The moon is a satellite of sun
  - The moon is a satellite of earth
  - The moon is a star
- Why does The Moon shine?
  - Because its surface reflects light from the sun
  - Because its surface reflects light from the earth
  - The Moon makes its own light
- What is The Moon covered by?
  - Trees
  - Rivers
  - Dusty
- How long does it take for The Moon to orbit around Earth?
  - 24,3 days
  - 27,3 days
  - 28 days
- What tool can we use to better see the moon?
  - Telescope
  - Stopwatch
  - Microscope

# Science Reading Comprehension Worksheets

---

1. b. The moon is a satellite of earth
2. a. Because its surface reflects light from the sun
3. c. Dusty
4. d. 27,3 days
5. e. Telescope
